Full-Time Research Participant Recruitment Coordinator for New NIH-Funded Multicenter Clinical Research Project to Develop Methods of Diagosing Chronic Traumatic Encephalopathy (CTE) During Life

Boston University Alzheimer’s Disease and CTE Center
Boston University School of Medicine

We are seeking a talented individual to oversee all activities to recruit former professional and collegiate football players from across the country to participate in a groundbreaking new research study.

**Qualifications**

- Bachelor’s or Master’s Degree in Communication, Marketing, Health or Science Communications, Advertising, Neuroscience, Psychology, Sports Management, Public Health, Athletic Training or a related field
- Experience in leadership roles
- Interpersonal and public speaking skills
- Strength in written and oral communication
- Social media outreach
- Exceptional organization and project management skills
- Marketing experience
- Knowledge of football

*2 year minimum commitment*

**Job Description**

The recruitment coordinator will be overseeing all aspects of subject recruitment for an NIH-funded multi-center study on Chronic Traumatic Encephalopathy. This will include advertising, social media outreach, giving presentations to groups of former athletes across the country, and other techniques. This individual will also be in charge of screening potential participants (including former professional and collegiate football players), as well as scheduling study visits across four performance sites across the country (working closely with site coordinators), booking travel, and working closely with the Program Manager and the project’s Executive Committee to assure that recruitment milestones are met.

To apply, please e-mail a cover letter and resume to:
Nicole Gullotti, Assistant to Dr. Robert Stern
