I. Northwestern University Equipment Policy Manual

A. Introduction

Capital equipment is tangible property having an acquisition value of \$5,000 or more and a useful life expectancy of one year or more. Fabricated equipment and component systems, which have an aggregate costs of \$5,000 or more and useful life expectancies of one year or more, are considered capital equipment.

Non-Capital equipment is property that costs less than \$5,000 or has a useful life of less than one year. Repairs, maintenance parts or components, warranty costs, maintenance contracts or annual software licensing fees are not considered capital equipment and will be expensed.

The Accounting Services Department (ASD) maintains the University's inventory of capital equipment. Each school, department, center, or other administrative unit within the University is responsible for safeguarding, maintaining and utilizing all equipment it acquires, either through purchase, gift or fabrication.

B. Capital Equipment Inventory

Northwestern University maintains its equipment inventory, within the NU Financials asset management module, to track capital equipment. Equipment records within the asset management module contain a variety of data including asset description, model number, serial number, custodian, location, funding source and financial information.

C. Purpose

The University maintains equipment inventory records for several reasons:

- To support proper financial reporting.
- To comply with Federal funding. By its acceptance of Government contracts and grants, Northwestern University is obligated to identify all government-titled property as it is acquired, keep specific inventory records and establish controls for the usage, maintenance and disposition of equipment and material.
- Federal Regulations allow an annual recovery of a portion of the cost of University acquired equipment through the indirect cost rate, if an accurate property control system is in place.
- Donors, grantors and benefactors expect the assets they provide will be accounted for, maintained and utilized. The University has a stewardship function.
- To assist the departments with tracking equipment and internal control.

D. Property Accountant

The Property Accountant manages the maintenance of the capital equipment inventory. This includes adding capital equipment, updating records and removing assets within the asset management system.

To aid in the proper tracking of capital equipment the Property Accountant coordinates with units to ensure capital equipment is tagged within a reasonable amount of time subsequent to purchase and that inventory verification is performed and documented at least once every two years.

The Property Accountant manages the capital equipment inventory verification process by notifying units of inventory cycle due date, monitoring the progression of inventorying by units, gathering the unit certified inventory sheets, sampling the results for accuracy, and updating inventory records in the asset management module.

E. Capital Equipment Unit Representatives

A capital equipment unit consists of a single department or related grouping of departments that has capital equipment.

Capital Equipment Unit Representatives act as a liaison between Financial Operations and their unit for capital equipment. Unit Representatives support Financial Operations by publicizing, monitoring and enforcing equipment policies and procedures.

- Capital equipment unit representatives act as a liaison between Financial Operations and their unit for capital equipment.
- Unit representatives serve as a starting point for Financial Operations asset inquiries.
- Unit representatives support Financial Operations by publicizing, monitoring and enforcing capital equipment policies and procedures at the unit level.
- Unit representatives are responsible for assisting Financial Operations with tagging their unit's new capital equipment in a manner that works best for their unit.
- If a unit has capital equipment purchased two fiscal years or more prior, that has not been verified in the prior or current fiscal year, they will be required by Financial Operations to perform capital equipment inventory verification for such equipment in the current fiscal year regardless of inventory cycle.

- At least biannually, it is the responsibility of the unit representative to determine and execute a method of capital equipment inventory verification that works best for their unit, provide required updates to Financial Operations and certify that they have done so with their signature.
- Additionally, unit representatives are responsible for facilitating the physical observation of capital equipment inventory by a Financial Operations representative when required.

A table of unit representatives is maintained by the Accounting Services Property Accountant. The table is published on the Northwestern University equipment inventory website.

A Director or Senior Administrator approval is required to authorize a capital equipment unit representative. Approval of authorization is documented on a capital equipment unit representative registration form. The registration forms are available for download on the Northwestern University equipment inventory website. Forms are submitted to the Accounting Services Property Accountant who updates the representative list and maintains a file of approved registration forms.

For more information regarding Unit Representatives, please see the [Capital Equipment Website](#).

Unit Representatives review capital equipment policies and procedures at an annual training, presented by Accounting Services. All registered Unit Representatives will be receiving a meeting invite. If you would like to be added on the invite list and attend for informational purposes, please email [Accounting Services](#).

II. Acquisitions

A. Purchases

To maintain the integrity and accuracy of the equipment inventory system, it is very important that the distinction between capital and non-capital equipment be understood and used by those departmental staff acquiring equipment of any sort.

It is important to make sure that the correct expense account is selected when purchasing equipment. Items costing \$5,000 and above should be coded to a capital equipment account and items costing less than \$5,000 should be coded to a non-capital equipment account. All capital equipment has a minimum useful life of one year or more.

In order to determine the proper account to use for equipment purchases, refer to the Equipment Expense Accounts below:

Category	Capital Equipment Accounts	Non-Capital Equipment Accounts
Athletic Equipment	77577	77077
AV Equipment	77545	77050
Capital Equipment	75843	
Computers	77570	77030/77090
Maintenance & Misc. Equipment		75850
Fixed Equipment (NIC)	75840	
Furniture	75841/77510	
Government/Sponsor Titled	77505	77071
Movable Equipment	75842	75844
Musical Instruments	77580	77040
NTG Telephone Equipment	77515	77060
Office Equipment	77550	77070/77010
Other Capital Equipment	77599	
Other Non-Capital Equipment		77099
Quest – High Performance Computers	77572	
Scientific Instruments	77560	77080/77020
Vault – Data Storage	77571	77091

B. Item Category for Equipment Purchases

Requestors need to make sure that when purchasing capital equipment, the correct item category is selected on the categories page (Add Items and Services/ Non Catalog/ Categories) in NU Financials. Capital equipment item categories always end with the word “Asset”.

Below is a list of the categories that should be used for capital equipment purchases:

- Artwork Asset (not capitalizable)
- Athletic Equipment Asset
- Audio-Visual Equipment Asset
- Computer Equipment Asset
- Computer Hardware Asset
- Elevator Building Supp Asset
- Food Service Equipment Asset
- Furniture Asset
- Furniture Classroom Asset
- Furniture Dorm Asset
- Furniture Office Asset
- HVAC Asset
- Laboratory Equipment Asset
- Laundry Service Equip Asset
- Maintenance Equipment Asset
- Musical Instruments Asset
- Office Equipment Asset
- Scientific Equipment Asset
- Shelving, Seating, and Lights Asset
- Shop Equipment Asset
- Telecom Equip Asset
- Vehicles Asset

C. Cataloging Equipment

The Property Accountant catalogs new equipment purchases throughout the year based on the information provided in a supply chain report and by the requester in the requisition header comments. The supply chain report displays paid vouchers for purchases that used a capital equipment account code ONLY. Other information contained in the report includes purchase order number, PO line item descriptions, shipping location and accounting information. The requester provides information such as custodian, building name and room number in the requisition header comments. Occasionally, the Property Accountant will contact the department for additional information needed to properly record the new purchase into the asset management system.

D. Tagging Equipment

Capital equipment tags have Northwestern University printed across the top with a unique identification number below; bar code tags were initiated on September 1, 1994, each new piece of capital equipment, however acquired, that has an original cost or setup valuation of \$5,000 or more (including

freight/transportation and setup costs), and recording its description, location and accounting information in the computerized database inventory system.

Capital equipment is tagged to provide an accurate method of identifying physical assets and link them with asset records in the asset management database.

The Property Accountant tags new equipment after cataloging the new equipment purchases throughout the year. However, Unit representatives are responsible for assisting Financial Operations with tagging their unit's new capital equipment in a manner that works best for their unit.

E. Capital Equipment Inventory Verification

Capital equipment records are verified at least once every two years to ensure that the inventory records within the asset management system are accurate.

Capital equipment inventory verification specifically includes verifying the existence, tag number, model number, serial number, building name and room number, custodian name and asset description. Physical inventory is performed on a biennial basis, (Chicago campus in the even-numbered fiscal years and the Evanston campus in the odd-numbered fiscal years). If a unit has capital equipment purchased two fiscal years or more prior, that has not been verified in the prior or current fiscal year, they will be required by Financial Operations to perform capital equipment inventory verification for such equipment in the current fiscal year regardless of inventory cycle.

The property accountant manages the capital equipment inventory verification process by notifying units of inventory cycle due date, monitoring the progression of inventorying by units, gathering the unit certified inventory sheets, sampling the results for accuracy, and updating inventory records in the asset management module.

It is the responsibility of the unit representative to determine and execute a method of capital equipment inventory verification that works best for their unit, provide required updates to Financial Operations and certify that they have done so with their signature. Additionally, unit representatives are responsible for facilitating the physical observation of capital equipment inventory by a Financial Operations representative when required.

F. Fabricated Equipment

Fabricated equipment is defined as an item of equipment that is built or assembled from component parts by a PI and/or other sponsored project personnel, an internal shop, or an external shop. When a completed item of fabricated equipment has an aggregate cost of \$5,000 or more AND when that item will be recorded as capital equipment in the University's asset system, the

individual component costs associated with the fabrication (regardless of the individual amounts) will not be assessed the Facilities & Administrative (F&A) rate.

Fabricated equipment should be identified prior to the acquisition of component parts or services related to the fabrication. This identification can be made, initially, in the sponsored project proposal budget or, later, using an OSR-2 form. The PI should detail what item is being fabricated, the materials and/or shop services necessary for the fabrication, and the estimated costs using the fabricated equipment questionnaire & form. Costs that should be budgeted and charged to a sponsored account include materials and supplies necessary for the fabrication as well as any internal or external shop charges. Although project personnel may participate in the fabrication, their salaries will not be exempt from the F&A rate assessment. Only labor costs that are implicit in the internal or external shop rates will be F&A exempt.

Acquisitions related to the (F&A exempt) fabrication should be charged to: 77535 Fabricated Equipment-Work in Progress.

Once the Office of Sponsored Research (OSR) is aware that fabricated equipment with an aggregate cost of \$5,000 or more needs to be charged to a sponsored account, it will open account 77535 in the financial system. This account is to be used solely for the purpose of accumulating the individual charges associated with this fabricated equipment. Costs charged to account 77535 will not be assessed the F&A rate.

In addition to opening the account 77535, OSR will notify the Property Accountant. The Property Accountant will assign a fabricated inventory number and will provide this number to the PI. This number should be referenced in all acquisitions for the fabrication. When the fabrication is completed, the PI and/or the shop should alert the Property Accountant. Upon notification of completion, an accounting entry will be made to transfer the individual costs to a capital equipment account. The fabricated item will also be tagged with a property tag number and recorded in the asset system.

If a fabricated equipment item will have an aggregate cost of less than \$5,000, the individual costs for all acquisitions should be budgeted and charged to the appropriate materials and shop accounts. Those accounts will be assessed the F&A rate. Account 77535 should not be used. In this case, an inventory tag number will not be assigned, as the fabricated item will not be recorded in the asset system.

If ownership of the final product is to transfer to the sponsor, the F&A rate exemption does not apply to the individual fabrication costs. In such cases, the costs associated with the fabrication should be classified under the appropriate materials and shop accounts. Account 77535 should not be used. The F&A rate

must be applied to all such costs associated with the fabricated item. Items purchased as part of the fabrication that individually cost \$5,000 or more and would otherwise exist as stand-alone items of capital equipment should be charged to account 77505-government/sponsor titled capital equipment. The account 77505 will be subject to F&A charges.

The use of account 77535 and the applicability of the F&A rate exemption is intended for instances of construction or modification of an item that will operate as a single piece of equipment and where shop services are typically required. This policy is not intended to address instances where components are connected together in a system, such as when individual computers and servers are joined to create a network. Please refer to the [Component System Policy](#) for guidance in these instances. Questions regarding which policy is applicable in a given situation should be directed to the [Office for Sponsored Research](#) or Accounting Services for Research & Sponsored Programs.

G. Component Systems

A component system is comprised of individual equipment or material items connected together to operate as a system, such as when individual computers and servers are joined together to create a network. Component systems are distinguished from fabricated equipment in that they do not generally require extensive construction or assemblage, as provided by an internal or external shop. For guidance regarding proper treatment of fabricated equipment costs, please refer to the [Fabricated Equipment Policy](#).

When system components are purchased the individual items that cost \$5,000 or more should be treated as capital equipment and exempted from the Facilities & Administrative (F&A) rate assessment. The individual items that cost less than \$5,000 should be treated as capital equipment when: 1) those items could not operate on a stand-alone basis and 2) they will be included on the same purchase requisition as the other system components. Both conditions must be met in order to qualify for F&A rate exemption. If those items less than \$5,000 do not meet these criteria, they should be charged to non-capital accounts and will be assessed the F&A rate.

H. Transfers into Northwestern University from Other Universities

Occasionally, when a faculty member transfers to the University from another institution, he or she will bring equipment. In such cases, the new faculty member's department should send a list of those items having an estimated fair market value of at least \$5,000 to the Property Accountant. The list should include the description, purchase date, original cost, serial numbers, model numbers, manufacturer, and new location along with any other pertinent information for each transferred item. The Accounting Services Department will

use this information to update the equipment inventory and tag the equipment, if necessary.

I. Donated Equipment

When a unit of the University receives a donated piece of capital equipment the Office of Alumni Relations & Development (ext. 7-2003) should be notified so that the equipment will be properly valued and a University gift receipt issued. DSO will issue a gift receipt to the donor and also prepare a gifts-in-kind transmittal form providing necessary information for the ASD to enter the donated equipment into the inventory system.

J. Non-Capital Equipment Inventory by Departments

The University's main equipment inventory covers all capital equipment with a minimum cost of \$5,000 and a useful life of one year or more. The vast majorities of computers cost under \$5,000 and are not included in NU's inventory. Since all departments are required to keep inventories of non-capital equipment (costing under \$5,000), the University is providing inventory tags and an Excel template to track department equipment. The departments will provide their own labor to set-up and maintain their inventories.

K. Capital Leases

Leased equipment is not owned by the University and is not included in the University's equipment inventory unless it meets one of the following criteria and is then considered a capital lease:

- Lease transfers ownership to Northwestern University.
- Lease contains a bargain purchase option.
- Lease term is 75% or more of economic life of the property.
- Present Value (PV) of lease payments is at least 90% of the fair market value (FMV) of the leased property.

III. Dispositions

A. Equipment Disposal Forms

Northwestern University members are required to fill out an equipment disposal form when they dispose of capital equipment from the University. The forms can be filled out on-line on the University's [equipment inventory website](http://www.northwestern.edu/equipment-inventory/) at www.northwestern.edu/equipment-inventory/. The information in the form is emailed to the Property Accountant who then uses the information to manually update the equipment inventory database. Disposed equipment can be sold, stolen, traded-in, scrapped, donated, returned to vendor, destroyed, transferred out, cannibalized, recycled, or posted on the surplus property exchange web page.

The following procedures should also be followed regarding the disposal of equipment from the University.

Equipment Acquired Using Federal Funds: Before sale, trade-in, scrapping or transferring of any capital equipment acquired using sponsored project funds can occur, Accounting Services for Research and Sponsored Programs (ASRSP), ext. 1-3385, should be consulted so that all necessary forms are prepared and clearances obtained. It is crucial the above mentioned process begin immediately so the dean, chairman, or unit manager is informed instantly, so as to not delay the disposal. Principal Investigators must also complete an OSR-4 form (instructions are located on the OSR website) for all capital equipment that is purchased on an active grant and will be transferred to another institution.

Equipment Acquired Any Other Way: When the sale, trade-in, scrapping or transferring of any capital equipment acquired any other way occurs, the administrative unit overseeing the equipment should notify the Property Accountant in ASD by filling out an equipment disposal form located at [Capital Equipment Disposal website page](#). The notification should describe the equipment, including the tag number, the disposal date and explain the method of disposition of the equipment. In addition, the administrative unit should keep on file the written approval of the dean, chairperson or unit manager for the action. Equipment inventory records will be adjusted based upon the information included in the equipment notification form. To ensure proper accounting of an equipment sale or trade-in, provide back-up documentation showing the amount of sale or trade-in to Michael Youakim, Property Accountant (fax: 7-7261).

Accounting for the Proceeds of Disposition: After the necessary approvals are obtained for the disposition of any capital equipment acquired as outlined above, any proceeds should be credited to the proper revenue account. Use the appropriate account and ChartField that was originally charged for the acquisition of the equipment. If the original acquiring account has been closed, use the department's appropriated budget account to record the credit from the proceeds of the disposition.

If the disposition is intra-University, an Internal Sales Journal (ISJ) or Correction Journal, if a sponsored account is involved, should be prepared showing the ChartFields to be charged (the Buyer) and the ChartFields of the selling unit. Enter the proceeds of the disposition and include a full explanation as well as appropriate approval signatures from both the buyer and seller units.

If the disposition is made outside the University, the check for the proceeds should be made payable to Northwestern University and forwarded with a full explanation, including approvals and the ChartFields to the Bursar for deposit.

C. Insurance

The University maintains a combination of self insurance and outside insurance which will provide for the expenses of repair or replacement of University equipment which is lost or damaged. This program reimburses the actual department expense to repair or replace such equipment, subject to a deductible of 10% of the expense with a minimum deductible of \$500.00 (\$1,000 for electronics) in each loss except for normal wear and tear and other common insurance exclusions such as war and nuclear contamination.

No deductible will be charged for theft losses where equipment has been taken and there is evidence of forced entry to the premises or secured storage cabinets. All other theft losses and losses from other causes will be subject to a 10% deductible based upon the cost of replacement or a minimum of \$500.00 in each loss (\$1,000.00 for electronics), whichever is greater. It is important to note that manufacturers of security devices, such as cables, may provide a limited rebate in the event their devices are defeated during a theft. Departments who opt to use such devices are solely responsible for collecting any and all such rebates from the security device manufacturers. All thefts from vehicles are subject to the above deductibles.

For a department to be eligible for reimbursement for equipment loss or damage, the following steps are required:

- The loss must be reported promptly to the Office of Risk Management using the **University's claim form**. You will need **Adobe Acrobat Reader** to open this form. Or you can obtain this form by calling Risk Management at 847-491-4334 or by logging on to their website at <http://www.northwestern.edu/risk/docs/property-loss-claim-form.pdf>. Reporting a loss and completing the claim form are departmental responsibilities. ***No claim will be accepted unless reported within 30 days of the loss.***
- Theft losses must also be promptly reported to the University Police Department so that an investigation of the loss can be conducted.
- The lost or damaged equipment must be repaired or replaced by the department before any reimbursement to the department can be made. It is the department's responsibility to furnish copies of original invoices and/or purchase orders for both the original equipment which was lost or damaged and for replacement equipment.
- Written documentation and/or damaged items may be required for review prior to the settlement of the claim. Failure to provide documentation or damaged items may void the claim.

Fine arts, rare books, musical instruments, and other objects of exceptional value must be provided for specially. These objects can be covered in a special form of

insurance that requires full details such as values, descriptions, etc. for coverage. For further information regarding coverage of this type, please contact this office.

It is important to note that insurance provided by the University covers University owned property only. Property owned by Faculty, Staff, and Students must be covered by the owners of the property. The University is not responsible for property it does not own.

D. Security

Our (Risk Management) experience is that many equipment losses are due to theft, often without any signs of forced entry or removal. Installation of theft prevention devices is strongly encouraged. Certain manufacturers of such devices, such as Anchor Pad, Inc., provide equipment replacement guarantees that will eliminate (insurance) deductibles for departments who use their products. Facilities Management can install theft prevention devices at departmental request with a modest cost to the requesting department. For further information about these devices call Facilities Management at (847) 491-5201.

IV. Policies and Procedures for Government-Titled Equipment

A. Responsibilities

The establishment and control of grants and contracts is maintained by two offices within Northwestern University. The Office for Sponsored Research (OSR) is responsible for assistance in identifying potential sponsors, developing and submitting proposals, completing agreements, accepting or transferring awards, establishing project accounts, post-award management of accounts, identifying contracts with government-titled property, and other research administration matters.

Accounting Services for Research and Sponsored Programs (ASRSP) is responsible for all financial matters relating to grant and contract administration. This includes preparing financial reports, invoicing and collection of receivable accounts, property reports and equipment inventories. ASRSP is also responsible for compliance with the equipment regulations of specific grants and contracts. Equipment is controlled and inventoried by the ASRSP Property Manager and the Property Accountant. The Property Accountant records and maintains all equipment in the institution. The ASRSP Property Manager is responsible for reviewing equipment purchases made with sponsored project funds.

B. Acquisition of Government Property

Authority for Government Property acquisition shall be determined by ASRSP before acquisition. The ASRSP Property Manager shall insure that specific approval, as required by each contract or grant, is on hand for all property

purchases. Screening of Automated Equipment with an acquisition cost of more than \$25,000 will require DD Form 1851. All other DIPEC and NASA screening for equipment costing more than \$10,000 will use DD Form 1419.

1. Contractor Purchased Property

After approval has been obtained, the Project Director shall initiate an official University requisition for the equipment. The requisition shall be reviewed and approved by the following:

- the responsible individual(s) in the department and dean's office, who determines that the acquisition of the item complies with University policy, and that the item is necessary to the research under the project.
- the ASRSP office, which verifies whether approvals are on hand and acquisition is not contrary to Government agency policy. ASRSP also checks the availability of funds and the period of the project in question.

The approved requisition is used by the Purchasing Department as the basis of an official University Purchase Order. If the order is over \$5,000, the Purchasing Department seeks at least three bids, where possible, and selects the lowest bidder. Where item quality is an important factor, vendor selection is made from only those vendors able to meet quality specifications. Where a manufacturer has established exclusive regional distributorships for products, the University's order shall be placed with that distributor.

2. Government-furnished Property

Excess Personal Property from DOD or GSA lists shall be frozen by the Project Director or Business Official, and a DD Form 1149 or SF122 prepared to include a description of the items, condition code, model number, Federal, National or DOD stock number, quantity, acquisition cost, and any other required information. A technical statement shall be submitted to justify the use of the item in support of the research contract or grant.

The Contracting Officer shall review the form, and determine that the following statements are included and are appropriate:

- the item will enhance the research at no additional cost
- the property is required and authorized by applicable military service/Defense Agency regulations
- Northwestern University certifies that it is unwilling and financially unable to acquire the item with its own resources.

The certification shall be signed by the appropriate official of the University.

C. Receipts for Government Property

A receiving copy of the official purchase order is sent to the Project Director. Upon delivery of the property, the Project Director or representative indicates the quantities received, their condition if damaged, the date received, and any back-ordered items. The receiving copy is signed and forwarded to the Accounts Payable department, where it serves as the authority for payment to the vendor when matched with a proper invoice. It is then filed with the disbursement voucher. The receiving copy and the disbursement voucher constitute the University's official record of the receipt and payment for the property.

Property furnished by the Government, including excess property, is shipped to the using department, inspected, and receipted for them on a copy of a SF122 Transfer Order or a DD1149 Invoice/Shipping document. This document is filed by the ASRSP Property Manager and is the University's official record of Government-furnished property.

D. Costing of Government Property

The Property Administrator shall record acquisition costs for property as being the purchase price net of any discounts, plus the transportation charges if charged to the contract. In the case of Government-furnished property, the cost recorded shall be that provided on the official transfer document or later acquired from the transferring party. Transportation and installation costs will not be considered as part of the price for Government-furnished property.

Except for items fabricated for research and development purposes, the cost of a fabricated item will be determined in accordance with the University's accepted accounting procedures. The cost of an item fabricated for a research and development contract shall be established by the engineering estimate of the Project Director.

E. Reports

The ASRSP Property Manager shall submit reports as required according to government regulations and contract and grant requirements.

Financial Reporting. The ASRSP Property Manager shall report by contract annually on DD1662 or NASA 1018 the dollar value of Government property held for each agency. DOE contracts require semiannual reporting of government-titled property on DOE Form F4300.3.

DIPEC Report. Acquisitions and deletions of Industrial Plant Equipment (IPE) shall be reported to the Contracting Officer on DD1342.

Physical Inventories. As required by the contract, the results of a physical inventory shall be reported and reconciled with current property records.

F. Definitions

Accessory Item. An item which facilitates or enhances the operation of plant equipment, but which is not essential to its purpose (FAR 45.501)

Auxiliary Item. An item required to operate the basic unit of equipment (FAR 45.501)

Award. A legal document, such as grant or contract from external sponsoring agencies, which provides support.

Capital Equipment. An article of non-expendable, tangible property having a useful life of one year or more and a minimum acquisition cost of \$5,000 per unit.

Constructed Equipment. Electrical, electronic, hydraulic, pneumatic, mechanical, or any other items that are interconnected so as to become a new functional unit that is essential in the performance of some activity.

Contracting Officer. That Government individual who is the contact for all reporting for a specific contract or grant.

Custodial Department. That department or unit within the University having physical control of equipment.

Government-titled Property. Government-furnished or contractor-acquired property that the Government holds title to. Government-furnished property is acquired by the Government and furnished to the University. Contractor-acquired property is purchased by the University with Federal grant or contract funds for which the award terms specify that the title will vest with the Federal Government.

G. Disposition

At the completion of the project, the ASRSP Property Manager shall report all property for which the University is still accountable and request disposition instructions. As necessary, cases of loss, theft or damage of property shall be reported to the Government Property Administrator. Upon receipt of disposition instructions, the following actions will be taken:

- If the Government retains title: upon receipt of a DD1149 a) comply with shipping or selling instructions, b) forward DD1342 to ONR who will forward to DIPEC if required, c) notify Principal Investigator of procedures, d) have ID tags removed, and e) change property records to indicate disposition.
- If there is a transfer of accountability to another University project: a) request a DD1149 b) sign and return it to the Government Property Administrator, c) forward DD1342 with change of project to DIPEC if required, d) notify

Principal Investigator, e) change ID tags if necessary, and f) change property records to reflect transfer.

- If the title is transferred or abandoned to the University: upon receipt of letter from the Government transferring or abandoning title, a) forward DD1342 if required to DIPEC indicating disposition, b) notify Research Services and Principal Investigator, c) have all Government markings and ID tags removed, and d) change property records to reflect relief of accountability.

Excess and Idle Industrial Plant Equipment (IPE). The ASRSP Property Manager shall report to the Government Property Administrator any Government property, including IPE, which is excess to the needs of the contract under which it was acquired or which is no longer required for the purposes authorized.

A DD Form 1342 shall be prepared and submitted to DIPEC through the Government Property Administrator. The Property Administrator will assure the proper storage of excess property and idle IPE until DIPEC and the Property Administrator determine its disposition. Upon receipt of disposition instructions the Property Administrator shall comply with shipping instructions, submit a DD1342 indicating disposition, notify the Principal Investigator, have all ID tags and markings removed, and change property records to reflect disposition.

H. Utilization

The ASRSP Property Manager shall assure that Government Property will be utilized only for those purposes authorized in the contract. The Property Manager will also assure that the property in the possession of subcontractors is utilized only as authorized by the contract. The ASRSP property Manager will immediately notify the contracting officer when usage of an item of property is not justified and is no longer necessary to the contract under which it was acquired.

I. Records and Physical Inventory of Government-titled Equipment

The Property Accountant and ASRSP Property Manager conduct biennial inventories of all Government-titled property. This inventory verifies the usage, condition, and location of the equipment. This information is used to update the Government-titled property database which ASRSP maintains.

1. Usage Codes. A numeric code established by ASRSP to denote frequency of use.

- 1** - An item which is used continually and never turned off.
- 2** - An item which is used at least once a week.
- 3** - An item which is used at least once a month.
- 4** - An item which is used only two or three times a year.
- 5** - An item which is never used and is considered idle/excess.

2. Condition Codes. All items are described as belonging to one of the following categories:

- **New.** A recently purchased item, working in perfect condition.
- **Excellent.** An item in very good condition without repairs.
- **Good.** An item which is usable without repairs.
- **Fair.** An item which is usable but worn due to wear and tear; may require repairs in the future.
- **Idle/Excess.** An item which is not usable and is considered scrap.

3. Equipment tagging. The Property Accountant assigns and affixes numbered tags to all items of University-owned and Government-titled equipment with a value equal to or greater than \$5,000 (unless the size or nature of the unit makes this impractical). In addition, Government-titled equipment is affixed with a Government tag next to the University tag. Auxiliary items such as monitors and keyboards shall also be individually tagged. This will identify the equipment as Government-titled for future reference by the department and its users.
